

Admiralty Digital List of Lights - Price List

The Admiralty Digital List of Lights (ADLL) is the world's most advanced source of light and fog signal information. Designed to meet SOLAS carriage requirements it uses the same official data provided in the paper Admiralty List of Lights. Information is sourced directly from national hydrographic offices worldwide and includes lights, light vessels, major light buoys and fog signals.

ADLL provides details of more than 70,000 lights worldwide providing complete global coverage. Simply click on the chart interface to record a position and obtain a virtual 360° panoramic view of all lights in range, even accounting for reduced visibility. The program has powerful search facilities and a graphic chart-based interface.

ADLL consists of the program and nine geographic Area Data Sets; you can select which areas you want. It is delivered on the combined Admiralty Digital Publications CD which also contains TotalTide and Admiralty Digital List of Radio Signals vol 6, and you can choose to buy any combination of these products and their geographic areas. All three products are annualised and will need to be renewed every 12 months.

ADLL is up to date at the time of purchase and provides a weekly update service via email, internet or on CD-ROM (postage is extra for CD updates). All updates are in line with the paper Admiralty Notices to Mariners.

The Admiralty Digital List of Lights will run on a PC with a 300MHz processor or better, with a minimum 64Mb RAM and CD-ROM drive XP, Vista 1Ghz 32 or 64 bit and Windows 7. It also requires Internet Explorer v4.01 or later.
