

TotalTide Price List

What is TotalTide?

TotalTide is produced by the UK Hydrographic Office to provide instant tidal height and stream predictions worldwide. Designed to meet SOLAS carriage requirements, TotalTide uses official data from the world's premier hydrographic authorities and the same prediction algorithms and Harmonic Constants as the Admiralty Tide Tables.

Tidal heights for Standard and Secondary Ports are displayed clearly and concisely in both graphical and tabular format. Tidal stream rates, for more than 3000 positions worldwide, are presented on a chart-based diagram.

TotalTide enables you to select and calculate tidal heights for multiple ports for up to seven consecutive days. Results include periods of daylight and nautical twilight, moon phases and springs/neaps indicator. Underkeel and overhead clearance can be displayed as a simple graphic to ensure safe passage-making and port entry. You can make use of the prediction algorithms by inputting privately held harmonic constants.

TotalTide is an annualised product which must be renewed; the previous year's product expires after 13 months. One CD includes the calculation program and seven Area Data Sets provide global coverage. A permit system provides access to the areas of the world you require. You can add to your coverage at any time.

TotalTide is designed to run on a PC with a 300MHz processor or better, with a minimum 64Mb RAM and CD-ROM drive XP, Vista 1Ghz 32-bit or 64-bit and Windows 7. It also requires Internet Explorer v4.01 or later.

TotalTide is recognised as the equivalent of the paper publication by many Flag States on the understanding that TotalTide is operated on a conforming computer system, a permanent security key has been installed and the most recent update applied.

This means TotalTide can be used instead of carrying the traditional paper tide tables onboard. However, it would be advisable to consult with your Flag State prior to replacing paper volumes onboard.
